The New Beginning

The new beginning you've eagerly anticipated is now at hand. You might have spent days, weeks, months, or even years preparing for this moment.

After your surgery, you'll awaken in the same body but filled with anticipation for the rapid transformations that are about to unfold, almost immediately. It's a bit like waking up on Christmas morning, eager to unwrap the gift of weight loss and improved health. However, there might also be some apprehension. Will you be one of the success stories?

Our newsletters are expertly crafted to help quell your fears and address your questions. It serves as your guide for post-operative eating, offering a wealth of tools to keep you on track, even if there are occasional slips along the way. Armed with this knowledge, you'll have the ability to cultivate new habits and steadily build your confidence.

Confidence is a key ingredient for success in any endeavor, including your weight loss journey. When you believe in yourself and your ability to achieve your goals, you're more likely to overcome challenges and make lasting, positive changes in your life. So, keep nurturing that confidence as you work toward your health and weight loss goals!

Choosing to undergo bariatric surgery is undeniably one of the most significant decisions in your life. It's common for many patients to receive opinions, whether asked for or not, from those around them. However, it's essential to cast aside any self-doubt.

Your decision is not elective or optional; it's a necessary step for your health and well-being. You have a dedicated team of highly qualified medical professionals supporting you, and their guidance is rooted in evidence-based research. This means that their recommendations are founded on established scientific outcomes that clearly demonstrate the benefits of this path far outweigh any potential risks.

As you continue on this journey, you'll begin to see these benefits unfold, sometimes gradually and at times in abundance. Never question that you've made the right decision. Your health and life are the driving forces behind this choice.

Indeed, in the first few days post-op, especially when your diet primarily consists of liquids, it might be challenging to imagine finding pleasure in eating again. Initially, eating could feel more like a chore, a necessity.

It's easy for thoughts of savoring flavors and enjoying your meals to take a backseat as you repeatedly remind yourself to "get that protein in" and "drink more water." You might wonder whether you'll ever look forward to eating again and if you'll be able to enjoy the foods you once loved.

It's important to recognize that immediately after surgery, your body undergoes rapid physical and hormonal changes. These changes can significantly reduce your appetite and limit the amount you can eat. Most of the initial weight loss comes from these changes. However, as time progresses, you'll find that you can consume slightly larger portions of food, tolerate a greater variety of foods, and regain an interest in eating. So, be patient; the enjoyment of food will gradually return.

Istanbul Bariatric Center NEWSLETTER

The great news is that, after the initial few months, you'll establish a solid foundation of eating and exercise habits that will support your ongoing weight loss. It might sound surprising, but some people who used to crave burgers and fries before surgery discover that their desire for such foods diminishes permanently. As you transition to a diet rich in nutritious foods and leave behind high-fat, high-sugar, and high-sodium options, you'll notice that your body starts to crave healthier alternatives.

This is the ideal time to revisit some of your old favorite recipes but with a healthier twist. If you enjoy cooking, it's an opportunity to experiment with spices and seasonings to add variety to your protein choices and introduce your family to this new lifestyle.

For those who haven't spent much time in the kitchen, there are plenty of quick, budget-friendly ways to eat nutritiously without extensive time and effort. Food is not just nourishment for your body; it's a daily necessity. But mealtime is about more than just the nutrients we consume. It's about gathering for a family dinner, celebrating an anniversary with a candlelit meal, meeting new people at a church picnic, or reminiscing about the dishes Grandma used to make.

The setting in which you choose to eat is just as important as the food itself in making the eating experience enjoyable. With a little time, some patience, and a willingness to experiment, you can truly make the enjoyment of nutritious foods a reality after surgery.
